Survey shows partisan and gender divides in perceptions of scientists, gender bias in science

FOR IMMEDIATE RELEASE
August 5, 2016

For more information or to discuss the results, contact: Peter Bothum, Office of Communications and Public Affairs (302) 831-1418

Science is a prominent topic in the 2016 presidential campaign, with Hillary Clinton proclaiming, "I believe in science," in her July 28 nomination acceptance at the Democratic National Convention.

A national survey by the University of Delaware's Center for Political Communication, conducted in July 2016, shows that most Americans have favorable views of scientists. Fully $84 \%$ of those surveyed agree that scientists are dedicated people who work for the good of humanity, while only $14 \%$ disagree. Fewer than half ( $47 \%$ ) agree that scientists tend to be odd and peculiar people, whereas $50 \%$ disagree.

Yet there is a party divide in perceptions of scientists. Among Democrats, $90 \%$ agree that that scientists are dedicated people who work for the good of humanity, with $53 \%$ strongly agreeing. Among Republicans, $86 \%$ agree with this, but only 43\% strongly agree.

Also, 47\% of Republicans agree that scientists tend to be odd and peculiar, compared to $42 \%$ of Democrats. Independents hold the least favorable views of scientists, with $83 \%$ agreeing that scientists are dedicated people who work for the good of humanity and $53 \%$ agreeing that scientists tend to be odd and peculiar.

A clear majority of those polled (60\%) hold favorable views of Bill Nye, "the Science Guy," with only 19\% viewing him negatively ( $21 \%$ had no opinion). Respondents also view astrophysicist and talk show host Neil deGrasse Tyson more positively (38\%) than negatively (23\%), though $38 \%$ had no opinion about him.

Democrats have more favorable opinions about Nye and Tyson than either independents or Republicans. Fully 70\% of Democrats view Nye favorably, and 43\% view Tyson favorably. Meanwhile $59 \%$ of Republicans and independents view Nye favorably. Slightly more than a third of Republicans (34\%) and independents (35\%) view Tyson favorably. Both Nye and Tyson have spoken out publicly about topics such as evolution and climate change.

Americans are divided in how they view opportunities for and bias against women working in science. Two-thirds (67\%) of those surveyed agree that women have the same opportunities as men to succeed in science, with only $30 \%$ disagreeing. At the same time, a substantial majority (58\%) agree that women who work in science are likely to experience bias based on their gender, with $36 \%$ disagreeing.

Republicans ( $75 \%$ ) are much more likely than Democrats (54\%) to agree that women have the same opportunities as men to succeed in science. Meanwhile, Democrats (69\%) are much more likely than Republicans ( $47 \%$ ) to agree that women working in science experience gender bias.

There is a clear gender gap in perceptions of opportunities for and bias against women working in science. Fully $72 \%$ of men agree that women have the same opportunities as men to succeed in science, compared to $62 \%$ of women. Meanwhile, women (64\%) are more likely than men (52\%) to agree that women working in science experience bias based on their gender.

#### Abstract

About the study The National Agenda Opinion Project research was funded by the University of Delaware's Center for Political Communication (CPC) and the William P. Frank Foundation. The study was supervised by the CPC's Director, Paul Brewer, a professor in the Departments of Communication and Political Science \& International Relations.

Results are based on telephone interviews with a representative national sample of 900 adult U.S. residents. Telephone interviews were conducted by landline (450) and cell phone (450, including 253 without a landline phone). The survey was conducted under supervision of the Center for Political Communication by Princeton Survey Research Associates International. The data were collected from July 6-13, 2016. Statistical results are weighted to correct known demographic discrepancies. The margin of sampling error for the complete set of weighted data is $\pm 4.2$ percentage points.

Readers should be aware that in addition to sampling error, question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of public opinion polls.

Please contact Paul Brewer at (302) 831-7771 for more details about the survey's methodology.
